Research presentation

A portable dark Beamer theme

Alex Researcher

Department / University

Workshop or conference

October 19, 2026

A clear research question

- Introduce the question and why it matters.
- Describe the evidence the audience will see.
- Use emphasis sparingly to highlight the key point.

Data and empirical approach

Data

Describe the sample, time period, unit of observation, and outcome.

Interpretation

Explain what variation identifies the parameter of interest.

Model

$$y_{it} = \beta x_{it} + \alpha_i + \delta_t + \varepsilon_{it}$$

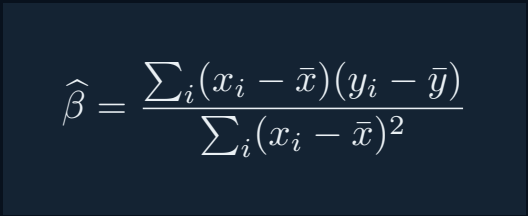

Define the variables and distinguish the estimate from its identifying assumptions.

An example table

Illustrative outcome	Estimate	Standard error
Outcome A	−0.12	0.04
Outcome B	−0.08	0.03
Outcome C	0.02	0.02

Invented numbers for layout demonstration only.

Figures and citations

Keep figure text readable against the dark background.

Example citation: Knuth (1984).

The figure at left is a typeset equation, included as a standalone PDF.
